Lezsi' a lezsi' rind lezsi' rindje  $T$

A Multiplicatio' periodusa  $T$

A két egyenaz' helyzet egyenaz'at  $K$  köpven

A kimondulas' az egyenaz' helyzetet  $x$  a lezsi'  $v$

A kimondulas' a másik " " } " "

$x$  is  $\{$  egy irányban vitében a második helyzet az elötlet az  
 $x$  és  $\{$  irányba erit.

ha az időtájon pillanattal jöve lezsi' szimulac'o, a mihas a  
multiplicatio' folyamában a változás, tehát az új egyenaz' helyzet  
elő' lehet elő' a másik

$$x = A e^{-dt} \cos \frac{t-t_0}{T} \pi \quad \text{I}$$

$$\text{és } v = -d A e^{-dt} \cos \frac{t-t_0}{T} \pi - \frac{\pi}{T} A e^{-dt} \sin \frac{t-t_0}{T} \pi \quad \text{II}$$

ha most az új egyenaz'on egyenaz' általán' könti lezsi' szimulac'o

az elötlet pillanataiban a lezsi'  $x$  el (a jövebbi  $x$  csak  $t=0$ ra speciális esetek)

e lezsi' szimulac'o új pillanataiban <sup>lehet  $t=T$  időben</sup> egyenaz'  $x'$ , és a megjelölt

1) és 2) két legegyszerűbb:

} 6), 7)

ha most most az első multiplikációra népe adva van  $x_1$  és  $v_1$  (például  $x_1 = k$ ,  $v_1 = 0$ ) akkor, kiszámítható  $x_1'$  és  $v_1'$  amide a hűveltség a másik álló körüli rendszerben  $\xi_1 = x_1 - k$  értéke és  $\omega_1 = v_1$  értéke 6) 7) el számítjuk,  $\xi_1$  és  $\omega_1$  értékek és, mint látjuk  $x_2 = \xi_1 + k$  és  $v_2 = \omega_1$  tehát tovább 6) 7) el  $x_2'$  és  $v_2'$  és így tovább.

A multiplikatív függvény első stacionárius ingállgatása

Kell hogy legyen  $x' + x = K$

és  $v' + v = 0$

erős ha a stacionárius ingállgatás  $x_0$ -el  $v$ -tel  
 $v_0$ -el jellemezzük

$$K = (a+1)x_0 + bv_0$$

és  $0 = -cx_0 + (d+1)v_0$

erős

$$v_0 = \frac{cx_0}{d+1}$$

és

$$x_0 = K \frac{d+1}{(a+1)(d+1) + bc}$$

} 81

Keressük meg most a kitérés maximumát  $x_m$ -et

A leffélérték  $v$ -re vonatkozó egyenlet az  $v=0$  helyen  
 hogy  $v=0$  helyen a maximum feltétele:

~~$$t_0 = \frac{t_0 - t_0}{T} = 0$$~~

~~ez az állítás is invariáns hely~~

és invariáns hely

$$x = Ae^{-\alpha t} \cos \frac{t-t_0}{T} \pi$$

Itt invariáns hely a maximumra vonatkozó  $t = \tau$  értéket  
 és  $A$  valamit  $t_0$ -t

ha keressük  $v=0$  akkor helyes

~~$$t_0 = \frac{t_0 - \tau}{T} \pi = -\alpha \frac{T}{\pi}$$~~

erős  $\frac{t_0 - \tau}{T} \pi$  értéket,  $\frac{t_0 - \tau}{T} \pi = -\alpha \frac{T}{\pi}$

$$t_0 = \frac{t_0 - \tau}{T} \pi = \left( \frac{v}{x} + \alpha \right) \frac{T}{\pi}$$

miért csak invariáns hely  $\frac{\tau}{T} \pi$  is történik  $A = \frac{x}{\cos \frac{t_0}{T} \pi}$

és ugye  $x_0 = Ae^{-\alpha \tau} \cos \frac{\tau - t_0}{T} \pi$

$$x' = 0,066329 x + 171,998 v$$

$$\frac{0,821704 - 2}{2,225524}$$

5) Gravitációs forgásmomentum egy homogén függőleges paraboloidos testre a par. középpontján körül.

A felfüggesztett tárgy test (mind vízszintes, függőleges stb) két síkba vonatkozólag szimmetrikus: a) a vízszintes síkba b) egy a forgási tengelyre át fektetett függőleges síkba (az irányított). (A feltevések mellett a test két kétoldali felülettel lehet érintkezni ).

A tárgy test függőleges méretű elhanyagolható. (Megvizsgálható mikor és merre?) (a, b, c abszolút értékű ajóvalhatóságok)   
 A paraboloid oldalai függőleges és vízszintes irányúak, határfelületek ingadozó: a, b, c, c   
 felület, lényegtelen ugyan de vészesen  $\frac{t}{\rho}$  a paraboloid körbelső oldala irányában.

A tárgy a paraboloid középpontján körül történik, vagyis a tárgy test tömegközéppontja a paraboloid középpontjába esik.

X, Y, Z tengelyrendszer a paraboloiddal párhuzamos és középpontja a par. középpontjába esik.

$$= \int \text{odx arctg} \frac{Bc}{A\sqrt{A^2+B^2+C^2}}$$

J. mivel az arctg  $\sqrt{x}$  tot független az egyen pörvénis hatása a a  
o tot A-ig való integrálás által lesz adva, ez pedig:

$$\underline{\underline{X_{II} = \int \text{odx arctg} \frac{Bc}{A\sqrt{A^2+B^2+C^2}}}}$$

$X_{II}$  is  $X_{III}$  kisíratása.

$X_{II}$  rekonstrukciója egy  $C^1$  hatása. egy olyan egyenletre meg az  $x^2+z^2$

integrálásunk most.

$$= \int \text{ody} c \int \frac{x dx}{(x^2+y^2+z^2)\sqrt{x^2+y^2+z^2}}$$

a határolt a  $\xi = \sqrt{y^2+z^2}$

jelölés  $\xi = \sqrt{A^2+y^2+z^2}$

tehát

$$= \int \text{ody} c \left\{ \log \frac{c+\sqrt{y^2+z^2}}{c-\sqrt{y^2+z^2}} - \log \frac{c+\sqrt{A^2+y^2+z^2}}{c-\sqrt{A^2+y^2+z^2}} \right\}$$

(Elemi gömb-trepanometriai tétel levezetése)

Gömbfelületen fűzőn két pont  $P$  és  $P'$  közötti ív hossza  $L$ , az ív középső pontját  $L = \frac{L}{R}$  (R a fűző sugarát) a  $P$  és  $P'$  helyek helyére is ábrázolt  $P$  pontban  $= A$ , és a  $P'$  és  $P$  helyek helyére is ábrázolt  $P'$  pontban  $= A'$

Azimutikus Észak felé mértén

A  $P$  pont orozási  $\varphi$  és  $\lambda$

a  $P'$  pont orozási  $\varphi' = \varphi + \Delta\varphi$  és  $\lambda' = \lambda + \Delta\lambda$

$$1) \cos L = \sin \varphi' \sin \varphi + \cos \varphi' \cos \varphi \cos (\lambda' - \lambda)$$

$$\text{térbe } \lambda - \lambda' = \frac{L - (\varphi' + \varphi)}{2}$$

$$2) \cos \frac{1}{2} A = \sqrt{\frac{\cos \delta \sin (\delta + \varphi')}{\sin L \cos \varphi}}$$

$$3) \cos \frac{1}{2} A' = \sqrt{\frac{\cos \delta \sin (\delta + \varphi)}{\sin L \cos \varphi'}}$$

1, 2, 3 mindig is végső  $P$  és  $P'$  a földfelületen bármely  $\varphi$  körpárhuzal (lásd Mehter, Elementármatematika, 1900, §. 203)

2 és 3  $\delta$  helyett használhatók:

$$4) \cos A = \frac{\sin \varphi' - \cos L \sin \varphi}{\sin L \cos \varphi}$$

$$5) \cos A' = \frac{\sin \varphi - \cos L \sin \varphi'}{\sin L \cos \varphi'}$$

ha  $\Delta\varphi$  és  $\Delta\lambda$  kicsinyek és a másodiknál megadott határogi-  
vel szokott legyen elhanyagolható akkor

$$6) L^2 = \Delta\varphi^2 + \Delta\lambda^2 \cos^2 \varphi$$

$$7) \cos A = \frac{+\Delta\varphi \cos \varphi + \frac{1}{2} \sin \varphi (L^2 - \Delta\varphi^2)}{L \cos \varphi}$$

$$8) \cos A' = \frac{-\Delta\varphi \cos \varphi + \frac{1}{2} \sin \varphi (L^2 + \Delta\varphi^2)}{L \cos \varphi - L \Delta\varphi \sin \varphi}$$

$$\text{és } \frac{\cos A'}{\cos A} = \frac{-\Delta\varphi \cos \varphi + \frac{1}{2} \sin \varphi (L^2 + \Delta\varphi^2)}{+\Delta\varphi \cos \varphi + \frac{1}{2} \sin \varphi (L^2 - \Delta\varphi^2)} \cdot \frac{\cos \varphi - \Delta\varphi \sin \varphi}{\cos \varphi}$$
